

**GAS
DISTRIBUTION
AND
TRANSMISSION
PIPELINE**

Designing, Installing and Maintaining Gas Distribution & Transmission Pipelines

For three decades, Team Fishel has been a contractor for the design, installation and maintenance of gas distribution systems. Our Project Managers, Gas System Designers, CAD Technicians and construction Teammates are trained, experienced, and field-tested everyday.

Our design team meets with land developers and gas utility companies to determine the most economical and feasible route to insure that we meet or exceed project specifications, as well as Customer expectations.

Our pre-construction services include

main line and service line locating, both horizontally and vertically; conflict review and analysis; facility design; site mapping; GPS surveying; and construction staking. In addition, our right-of-way services include negotiating temporary and permanent easements, settlements, and permit procurements.

As a result, we create detailed prints that minimize project construction time and costs for our Customers. Team Fishel uses the latest software applications to prepare detailed plan and profile drawings showing existing, as well as proposed utilities. We can

also prepare models for existing distribution systems with added future loads using GASWorks™.

When it's time to put pipe in the ground, our OQ certified Teammates are on the job installing low and high pressure steel and plastic lines and metering systems, detecting and repairing leaks, replacing service lines, plumbing meters and re-lighting appliances. We make sure to minimize open-cutting by utilizing directional boring, pipe-pushing and tunneling.

Our Teammates specialize in helping our Customers comply with the federal government's 20-year mandate to replace all bare steel and cast iron underground pipe. We have developed efficient procedures that transition bare steel and cast iron into wrapped steel or plastic on both small and large scale projects.

Once the project is complete, we can provide as-built drawings and exhibits to document the system for better asset management and long-term maintenance.

INSTALL

MAINTAIN

Our Operator's Qualification (OQ) training program assures our Teammates receive the most up-to-date training available on gas installation methods and safety procedures. Our Safety Program and Experience Modification Rate (EMR) speak for themselves and highlight our commitment to being ACCIDENT FREE.

Let Team Fishel show you what we can do on your next project. Quality construction right from the start for a system that lasts.

OUR SERVICE CAPABILITIES:

Operator Qualified for Gas Covered Task

Welding and steel fabrication

Construction of plastic and steel pipelines distribution and interstate high pressure distribution

Upgrade of existing low pressure distribution lines Including gas line insertion

Customer service installation including plumbing, replacing meter/regulator and re-lighting appliances

Building and Installation of District Regulator Stations

Installation of heaters, gas odorant tank storage facilities

Hydrostatic Testing

Corrosion:

Soil to Pipe Readings

Anode and Rectifier installations

Valve Inspection and Maintenance

Leak Survey, Locating and Leak Repair

Cast Iron Replacement or Repair

Hot Taps and Live Tie-ins

**BEST CHOICE FOR UTILITY CONSTRUCTION
& NETWORK INSTALLATION**
